DEVELOPMENT AND ENQUIRY PROGRAMMES PUPIL INVOLVEMENT IN NETWORKED LEARNING

A tool for helping pupils and teachers to create a vision of pupil involvement in school improvement, learning and teaching

Contents

Introduction	1
Programme	2
Sitting map	3
Crawling map	4
Walking map	5
Running map	6

This activity has been designed to help pupils and adults create a vision for pupil involvement in their school or network. It has been developed with the help of pupils, practitioners and academics from several different Networked Learning Communities (NLCs).

At an NLC Futures Thinking event, a group of 16 delegates spent an entire day discussing the issue of pupil involvement. Together, they created three different maps which represent networks at varying stages on the journey to fully involving pupils in every aspect of learning, teaching and school improvement. They also created an extensive list of ideas, questions and suggested activities for networks interested in pupil involvement. The activity was then further developed by delegates at a recent NLC conference on pupil involvement.

The three stages are named sitting, crawling and walking and are solely intended to help people taking part in this activity to discuss the issue of pupil involvement:

- **A sitting network** is one that has hardly started on the journey of involving pupils and may not even know where to begin.
- **A crawling network** is one that has started on the journey and has had some success with involving pupils.
- **A walking network** is well on the way to fully involving students and has had success with a range of different activities. The pupils feel their voice is listened to and their ideas are valued and acted upon.

What do we mean by pupil involvement?

Pupil involvement is a broad term used by the Networked Learning Communities programme to mean involving pupils and students in almost every aspect of learning, teaching and school improvement. Some examples of pupil involvement would include the areas currently known as:

- consulting pupils
- pupil mentoring
- student leaders
- students as researchers
- pupil learning walks
- pupil steering groups
- pupils as teachers
- the work of school and network councils
- pupil representation on network steering groups

Above all else, it means pupils and adults working together within their networks to achieve all of this.

Why would you do this activity?

By taking part in this activity you will:

- discover what pupils and adults think and feel about pupil involvement
- learn from, with and on behalf of the pupils and adults in your network
- create together a vision for pupil involvement in your network

Who should be involved?

This activity can be used by groups of any size but it is most suited to groups of around six people. It is important that the group consists of adults and pupils and that measures are taken to ensure that everyone's voice is heard equally. If the group is larger than eight people then it is advisable to split into smaller groups. If you have a number of discussion groups then you will need to include time at the end of the session for each group to share their vision.

Who should facilitate this activity?

This activity could be facilitated by:

- a pupil, teacher or classroom assistant from within your network
- a lead learner or headteacher
- your NLC co-leader
- your NLC facilitator
- an adult or pupil from another network

Ideally, your facilitator will have a good understanding of the activity and may have already taken part on a previous occasion. They will also need to be good at working with groups of pupils and adults and must not be afraid to ask challenging questions.

How long will it take?

To get the most from this activity you will need to allow at least one hour. However, if you need time for groups to feedback to each other then you may need a further 30 minutes for sharing your ideas and answering questions.

What resources are required?

Included in this pack are copies of the three maps of networks at different stages of development and a selection of cards with ideas, questions and suggested activities for moving your network forward. You will also need to make plenty of materials available around the room to record and capture all your ideas and discussions, for example flip charts, marker pens and Post-it® notes.

Introduction

Before the event, the facilitator will need to brief the participants and ensure that they are prepared for an interactive session, with pupils and adults working creatively together. The facilitator introduces the session by giving a brief outline of the task and by explaining that the central aim will be for the group to create a vision of pupil involvement in their network. On their journey the participants will be learning from and with each other, and learning on behalf of all the pupils and adults in their network.

Where are we now?

The activity begins with each group exploring the three maps of different stages of network development. As a group, they discuss how their network compares to the sitting, crawling and walking networks. It is essential that everyone has a voice and that pupils' and adults' views are valued equally.

What do we need to think about?

Once everyone has agreed on which stage of development their network most closely resembles, the group then looks at the set of cards and discusses the ideas suggested on how to move their network forward. Many schools and particularly networks, find they lie across or between two stages.

What is our vision for pupil involvement?

The group then creates their own vision of a map for pupil involvement in their network drawing on all the ideas they have discussed during the activity.

Next steps

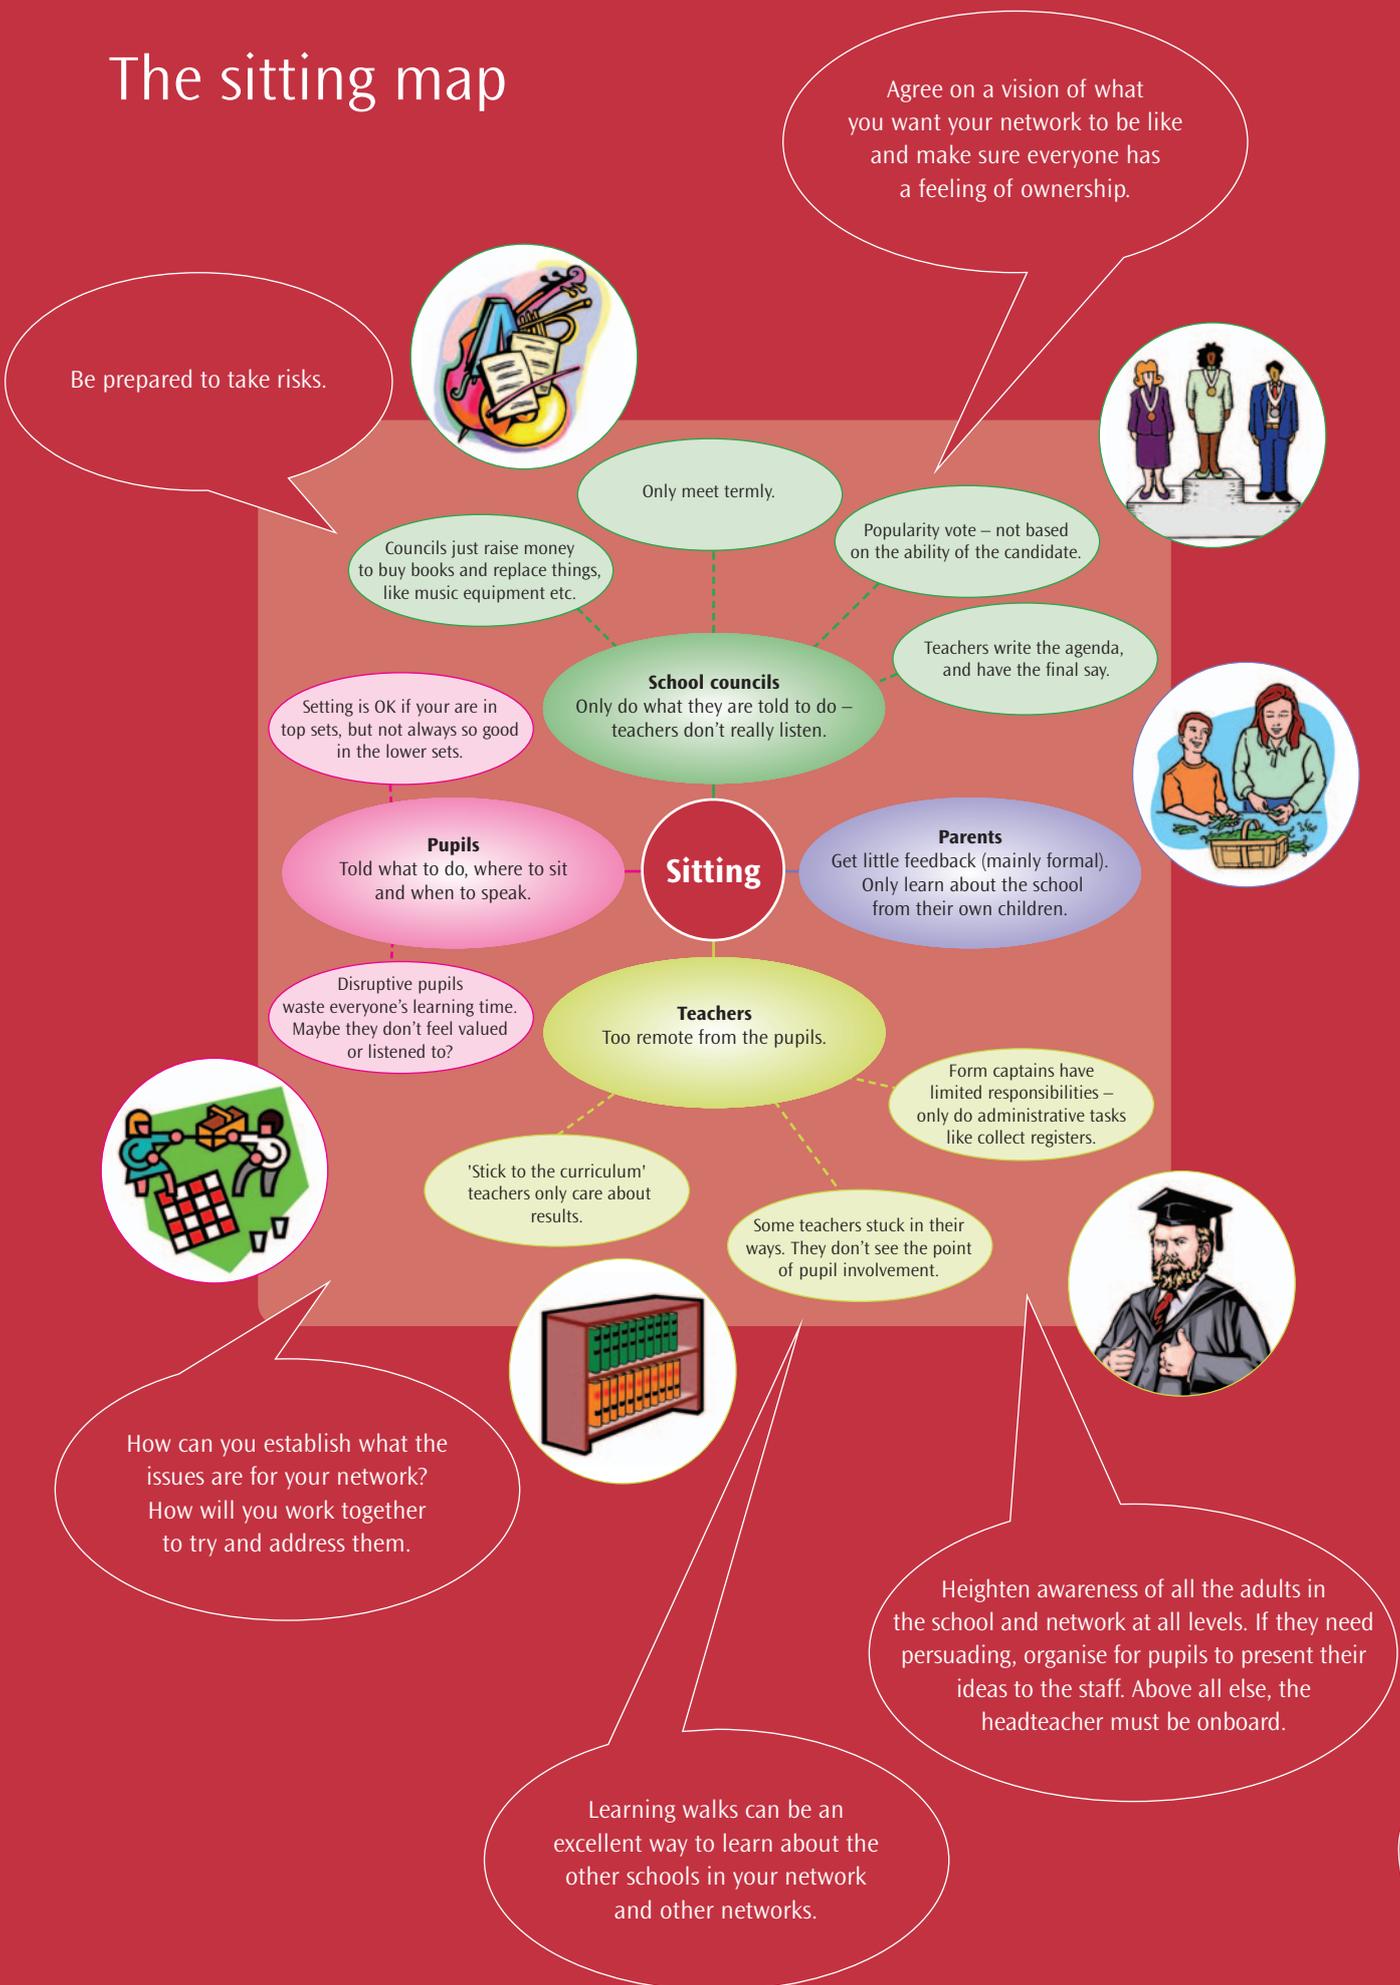

During the final part of the session the group needs to decide on the actions that will make the vision a reality, who will take those actions forward and who will safeguard the vision.

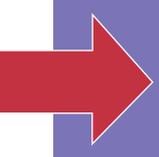

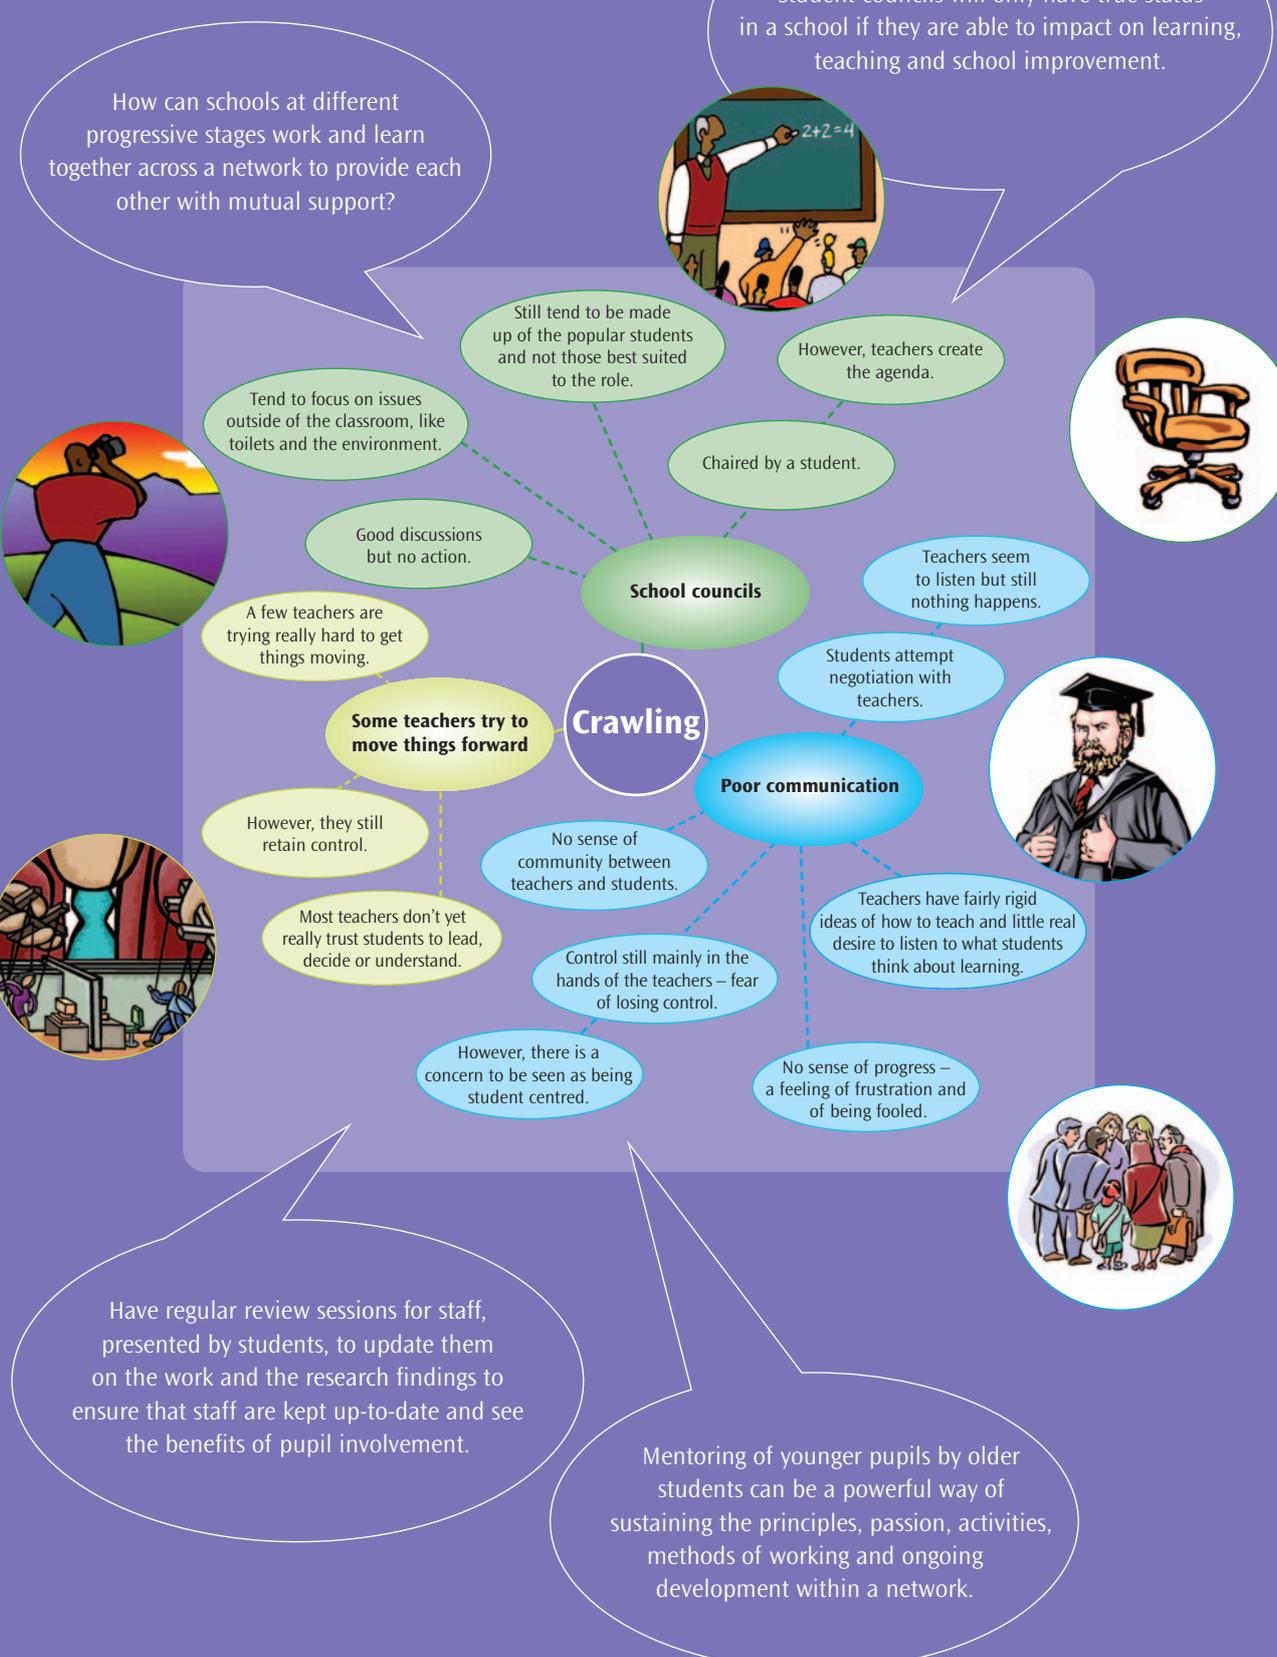

Additional plenary for larger groups

Larger groups will need an additional plenary session where the different visions and lists of actions from each discussion group can be merged to create a network vision and an agreed way forward. It will be important to leave sufficient time for this activity.

The sitting map

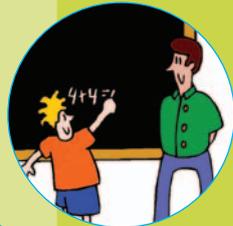

The crawling map

The walking map

E-communities can be places where pupils from all over the country (and the world) can build relationships, share ideas, problem solve together and learn from, with and on behalf of each other.

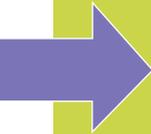

Walking

How can ICT enhance communication across and between schools?
 How can school councils and student researchers disseminate their ideas? How can you use ICT to consult pupils on a whole range of issues?

By asking pupils to conduct an enquiry into the transfer process, to rewrite the school prospectus, to visit each others' schools and to mentor younger pupils – they can help schools across all phases in the network, work together more effectively.

The running map

Students as researchers can carry out their own research into learning, teaching and school improvement in their own school and in other schools across the network.

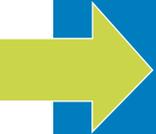

A pupil steering group can report to the network steering group (through the student member) their research findings and their recommendations for how the network can improve.

Build your own vision

Student leaders can co-ordinate and lead activities across the school with adults acting as facilitators, if necessary.

When pupils discover their preferred learning style, and how they learn best, they can help teachers to facilitate their learning more effectively.

Sometimes you will need to work with other schools to solve problems, and other schools may come to you for ideas.
